*Report based on a lecture given at the “Studiedag Mouterij en Brouwerij”,  
Hogeschool gent, Gent, Belgium, 1 December 2006.*

### ABSTRACT

Spinning Cone Column device is a new technology for beer dealcoholisation which is based on vacuum stripping. By means of rotating cones, the efficiency of alcohol removal is very high and is combined with a low thermal impact to the beer. Results are given from one of the first plants in Unicer, Porto.
